Resume Sandwich Examples

Position 1	Position 2	Position 3
Product Strategy	Product Requirements	Roadmapping
Product Leadership	Prioritization	Project Management
Researching New Products and Features	Customer Feedback and Discovery	User Experience
Stakeholder Management	Competitive Market Analysis	Testing
Reporting	Metrics and KPIs	Tracking
User Experience	Process Documentation	Training Documentation

Product Strategy and Vision

- Contribute to the team's strategic **roadmap** and shepherd **product features** from concept through **validation**, **launch**, and **iteration**
- Assess **opportunities**, create **product strategy** briefs and specs, establish success **metrics**, and measure and communicate the impact of shipped **products** and **features**
- **Lead all aspects of the team's product vision, strategy, development, and execution.**
- Synthesize and develop **product strategy** with **business partners** on **cross functional** teams.
- Contribute to the **vision** and **strategy** for **product analytics** and the wider data organization
- Work side-by-side with the **product** team on building a **data-driven product strategy**, the sizing of potential **opportunities** for the **product**, and inform team **prioritization** and **roadmapping**

Product Requirements - Gathering, Writing, and Communicating (GWC)

- Provide **business analysis**, **requirements**, and **strategic direction** to other **product** and **technology** teams in the **design**, **implementation** and **support** of a new **platform** that cuts a **cross functional** team **backlogs** including **backoffice**, **API** and **front end**.
- Understand and articulate tradeoffs, taking into consideration **product goals**, **internal requests**, **partner feature** asks and **regulatory requirements** against **delivery time** and resources.
- Partner with **subject matter experts** to **translate** reporting rules into regulatory compliant **product requirements**.
- Work with **Product** and **Development** teams to **translate requirements** and provide **prioritized feedback** to help ensure **delivery** of the **product roadmap**
- Manage and submit **product documentation** as required, including but not limited to **development requirements** via **JIRA**, internal **product overviews**, and **partnership** collateral.
- Actively contribute to meeting the **product specification requirements** of numerous projects across **platforms** and assist with projects across different software applications as needed.
- Bring your **product domain knowledge** to the **data engineering** team and gather **requirements** for them to build foundational **product analytics** **data assets**.

Roadmapping

- Assist in setting the partnership and integrations product roadmap and coordinate timelines and due dates to ensure successful roll outs.
- Represent Product day-to-day in the agile planning process
- Own the definition and roadmap of revenue conversion features.
- Create product artifacts (process diagrams, epics/stories, wireframes) and collaborate with design and engineering to define and execute the product roadmap.
- Identify opportunities and help shape the roadmap through data analysis, user research, and cross-functional collaboration
- Maintain product documentation, issue resolution tasks, change requests and change management to deliver on product roadmaps.

Prioritization

- Prioritize product roadmap through continuous iteration, user research and analysis, and experimentation when appropriate.
- Define and prioritize requirements towards a growth-oriented roadmap
- Help define and prioritize the product roadmap, conduct sprint-planning and backlog refinement sessions for a backend engineering team responsible for multiple work streams
- Prioritize the implementation of new features and set specific timelines
- Prioritize projects based on business impact and available resources.

Project Management

- Develop and manage end-to-end project plans and ensure on-time delivery.
- Provide hands-on program management during analysis, design, development, testing, implementation, and post implementation phases.
- Lead rapid assessment projects for time sensitive issues and full-scale process improvements as part of a larger program.
- Manage ongoing projects and contribute to quality control for our company's numerous applications.
- Run an agile workflow to support the product lifecycle from conception to release and beyond
- Break down projects into executable tasks with Engineering leads

Leadership - Goals, Objectives, and Business Impact

- Communicate objectives, goals, and progress to team members, management and key stakeholders
- Strategize and outline the goals and objectives and monitor multiple projects through the entire cycle.
- Proactively identify and resolve strategic issues that may impair the team's ability to meet strategic, financial, and technical goals.
- Lead by example to build a culture of accountability and rigor to substantiate proven business impact. (Business Impact)

Customer Feedback (User Centric)

- Solicit, log and report on customer feedback to appropriate teams.
- Prepare & present articulate customer and member facing demonstrations that engage and inspire our product and services and how it relates to our mission
- Learn the dynamics of our ecosystem, understand the psychology of our users, and identify their product needs.
- Take ownership of translating broad questions into actionable research plans, proactive data exploration, and storytelling to communicate results in an effective way
- Working directly with customers to understand pain points and future needs to define product roadmap
- Document use cases and customer outcomes for engineering teams.
- Advocate for our customer base by communicating data insights and recommendations to marketing, product and leadership teams

User Experience (User Centric)

- Create consistent, unified experience across products, platforms, and devices
- Create intuitive experiences users love.
- Suggest product enhancements to improve user experience
- Work to identify areas for improvement within the software to increase client satisfaction
- Seek ways to improve the process of delivering solutions to clients.

- Identifying **opportunities** to improve services and ensure credibility with our customer base.
- Connect with customers to understand their goals and needs and **translate** those into solutions.
- Work with customers and develop new **product features** that enhance user experience across specific **products**
- Drive customer loyalty with connected digital **workflows**.
- Go beyond traditional **CRM** and field service.
- Digital **workflows** are the building blocks for modern customer experiences.
- Extend service beyond the contact center and scale operations by automating work across departments.
- Provide **subject matter expertise** to help define and **translate business decisions** into **technology** solutions.
- Identify the most important **opportunities** to remove barriers for **product** engagement and adoption

Researching New Products and Features (Go to Market)

- Assist in new **product introduction** and release activities
- Advocate for tradeoffs between risk, **customer friction**, and stopping potential unwanted activity
- Generate **quantitative insights** to inform **product** direction and **opportunities**
- Bring new ideas for **product** features and differentiated value to the marketing and **engineering** teams using your expertise and intuition for great **product**.
- Help define and identify areas of friction and growth **opportunities** within the lead experience to develop **data-driven product** solutions

Competitive Market Analysis

- Perform analysis of customer and user behavior patterns and extract insights to be shared with key **stakeholders**, including senior management.
- Conduct research to identify **customer needs** and market gaps
- **Analyze** competition and the future of the market

Testing and Validation

- Perform quality assessments on the **product**
- Monitor and report on **users'** reactions after **launch**
- Develop experimentation **strategy** to continuously improve our competition **platform**
- **Design**, implement and measure multivariate A/B tests to show incremental impact across new **features** and optimize current **features**.
- Drive definition, innovation, **roadmap**, and **design** of A/B tests and conversion revenue experiments to accelerate our active and paid members' growth.
- Perform feature **engineering** and build analytical models to discern good customers from bad actors
- **Design** experiments, read A/B tests, and perform complex analyses from existing data
- Foster an understanding of experimental **design** and methods, from quasi-experiments to A/B tests
- Run A/B tests to increase usage in the **product** as well as via email and other channels to drive engagement & adoption from designing to analyzing the test

Stakeholder Management: Cross Functional Teams

- Help define and build a strong data culture at by working cross-functionally with data peers and company leadership
- Become a subject matter expert on the **platform** and all **partnerships** to be able to assist internal teams with questions and address client needs
- Collaborate with internal team members including **development**, **product**, client success, marketing, security intelligence and leadership as required to fully understand the **requirements** of each **implementation**
- Establish solid working relationships with **Engineering**, Marketing, and business stakeholders.
- Partner with Operations leadership to drive the **strategic direction**, **development** and **design** of our processes, technologies, vendor relationships and partner **experiences** to **support** operations.
- Collaborated with Designers, Engineers, Data Scientists, and User Researchers to **Analyze** Patterns and Trends, and Identify New **Opportunities** for Growth
- Manage communication of progress/status to internal and external **stakeholders** via Agile **delivery** methods.
- Partner with key **stakeholders** to **support** strategic goals and business initiatives
- Build alignment with cross-functional partners: engineers, marketers, analysts, content writers, and designers.

- Partner with multiple teams to define the measures of success, develop the analysis and **reporting** necessary to measure, understand and improve these **metrics** through standardized dashboards and ad hoc reports
- Partner with **Product** Managers, Program Managers, and Engineers to develop **product** and program **strategy**
- Partner with **product** managers to define common user paths and actions, outline tracking, and promote quality data collection
- Collaborate with teammates and **stakeholders** from marketing, project management, **engineering**, business **development** and **design** teams about business **requirements** for key software applications.

Stakeholder Management: Business Teams

- Cultivate cross-functional relationships to advocate for your team's **roadmap**, keep partners informed, gather input, and influence thinking
- Partner with cross-functional teams to **design** and run experiments and to commission customer insights and user research to inform **product** decisions
- Work closely and collaboratively with **design** and **engineering** to build **products** that are effective, scalable, and easy-to-use for buyers, sellers, and agents. Liaise with the Marketing department to ensure proper awareness and positioning of new **products**
- Worked with Market and User Research Teams to Better Understand **Customer Needs**
- Handle external communications with third party partners and data providers as needed (Business Collaboration External)

Stakeholder Management: Engineering Team

- Collaborate with **Engineering** and business owners for project **requirements** and scope in order to drive **delivery** of **features** and processes.
- Coordinate with the **engineering** department to deliver functional solutions
- Work with **Product** and **Development teams** on **roadmap execution** and **delivery**, data quality measures, usage **metrics** and reports, release planning and testing, necessary data upgrades and more.
- Partnered with **Engineering** to Clarify and Planned for Sprint Releases
- Assist with the **development** of **product features**
- Expand on the **Product Trio** (**Product**, **Engineering**, and **Design**) to collaborate with User Research and Data Science in discovery and **delivery** cycles

- Work closely with the software **engineering** team to ensure complete, accurate and stable tracking of user activities on our online **products**.
- Partner with our site-focused **engineering** teams to execute on projects based on what's identified to accelerate growth globally

Stakeholder Management: Design Team

- Provided **Design** Team **Feedback** and Perspective and Aimed for Cohesive Experience Across all Touchpoints
- Established and Maintain **Design** Principles and Patterns to Be Used Across All Channels and **Experiences**
- Conducted in UX Research including User Interviews, Usability Testing, Concept and Prototype testing

Stakeholder Management: Customer

- Manage the successful **implementation** of key software integrations and the deployment of **partnership products** from the time of initial relationship introduction throughout the **development** lifecycle
- Work closely and continuously with customers to understand their needs and **opportunities**
- Own a customer issue end to end: understanding the pain point, setting the **strategic direction**, and successfully delivering the delightful customer experience.

Metrics and KPIs (Data Driven)

- Drive customer and business impact against **OKRs** and your team's key **product metrics** by prioritizing the right problems to solve
- Empower the company to make informed decisions by turning our user data into actionable insights
- Proactively spot patterns in our user data that identify potential blind spots and **opportunities** and make recommendations for how to address them

- **Design** and implement an effective data and **analytics** plan, ensuring that we identify the most important questions and craft a detailed **execution** plan to answer them while operating with imperfect data
- Make strategic and data-based decisions about trade-offs, balance scope with quality, and communicate to various audiences, from teammates to executives.
- **Analyze** member data and **metrics** to measure the business results and find **opportunities** to evolve.
- Use **analytics** to understand how our customers use our **platform** to solve their challenges and inform decisions on future improvements.
- Communicate your findings, suggestions and improvement ideas to the **product**, software **engineering** and **data engineering** teams to establish a streamlined **product analytics** process
- Determine the **metrics** we use to measure program success
- Define lead **metrics** and perform analysis to connect **technology** to larger business impact
- Own the stakeholder management with the **product** team for defining **product** KPIs.

Tracking (Data Driven)

- Track progress, resolve dependencies, evaluate risks and communicate status to management and project **stakeholders**.
- Own team goal-setting, tracking and **reporting** on team progress and impact, and the process behind measuring team performance
- Proactively monitor tracking performance, detect anomalies and work with the software **engineering** team to repair broken tracking.

Reporting (Data Driven)

- **Design** and build **reporting** for the **product** team to extract insights on the usage of our **products**.
- Be the go-to **analytics** expert of **product analytics** at covering all the business and technical knowledge related to tracking, **reporting** and KPIs for **product analytics**.
- Become an expert in our **product platform** to handle KPI **reporting** and provide visibility to **metrics** across the **technology** team and organization

Process Documentation (Support)

- Document the current state, design future state processes and define short and long term roadmaps to balance tactical and strategic enhancements.
- Create and iterate on processes and systems for a scalable analytics practice across the technology team
- Create feedback systems and develop frameworks to improve the product discovery process
- Self-start and take ownership over the details from beginning to end
- Develop tools and processes to improve team efficiency and speed
- Identify and implement ways to improve the systems scalability and functionality.
- Guide the next phase of development as the application scales to multiple services and teams

Training Documentation (Support)

- Create support and training documents for internal and external users
- Train and provide support for customers and members of the SUCCESS team
- Ensure all internal documentation is kept up to date in a clear and concise manner
- Drive in-product adoption via building user guides and surface training content

PRODUCT MANAGER

Product Management | User Experience | Roadmaps | Marketing | Design

Senior Product Manager with over 6 years of experience leading cross functional teams, through the software development life cycle, utilizing design thinking to deliver both consumer facing and enterprise grade products. Strategy leader in the area of product management and user experience strategies, including: internal support; on-boarding and sales strategies; and engineering support, which drove product vision.

QUALIFICATIONS SUMMARY

Business	Product Management, SaaS/Enterprise Software, Customer Interview, Business Intelligence
Software	Trello, Jira, Asana, SketchUp, Adobe Creative Suite, InvisionApp, Balsamiq
Design	Design Thinking, User Experience Design, User Interface Design, Mobile Design
Technology	HTML, CSS, JavaScript, PHP, Rails, MySQL, MongoDB, JSON, Git
Strategy	Cross Functional Team Lead, Agile/Kanban, Product Release, Innovation, Software Development Lifecycle, Product Roadmap, Lean Startup
Other	French

ANDY FITZGERALD
